Maggie's Farm Yard Bug Spray for Lawns, Landscapes and Perimeters is a ready-to-use product that is lethal to bugs, killing the most common outdoor lawn, landscape and perimeter pests. Using natural plant oils as the active ingredients in a water-based formula, it leaves no harmful residues. Bugs are tough, but solutions should be simple and effective. Maggie's Farm is committed to offering products that are Simply Effective. It is a simple as that!

DIRECTIONS FOR USE

Always read label directions and precautions prior to use.

Shake well before use and periodically during use.

Outdoor use only.

Sprayer Directions: Attach the bottle nozzle to a garden hose. Make sure the nozzle is in the "OFF" position, and turn on the water spigot to fully open. Extend hose to the farthest area to be treated. Hold the bottle upright and point nozzle toward the treatment site (not the ground). Bend the small plastic safety tab with your thumb and turn to "ON". Begin spraying, working back towards the spigot. The bottle will empty after 10-12 minutes of spraying. To stop spraying, turn to "OFF" position. Turn the water off. To relieve pressure before disconnecting nozzle from the hose, turn dial to "WATER" until the water stops. Then turn back to "OFF" position and disconnect from hose.

Treatment Directions: This bottle is designed to cover up to 5000 sq ft. For preventative treatment and light infestations, apply at a rate of 500-600 sq ft per minute. For heavy infestations apply at a rate of 250-300 sq ft per minute. For best results, wait a day or two before mowing or watering the treated area. Reapply monthly, or as needed.

Lawns: For lawn pests, spray in a sweeping motion to cover the target area, overlapping the spray to get total coverage.

Trees, Bushes and Heavy Vegetation: For plant pests, mosquitoes, ticks and other pests that harbor in heavy vegetation, spray thoroughly to insure treatment reaches deep into vegetation, versus just spraying the top. Spray foliage to the point of runoff.

Ornamental Plants: For aphids, beetles, caterpillars, mites, scale insects, whiteflies and other garden pests, spray to wet the foliage to runoff. Spray on the underside of leaves as much as possible. Only apply at the lower rate (500-600 sq ft per minute) to minimize potential burning of delicate plants, and apply late in the day.

Building Foundation (Perimeter Treatments): To help prevent ants,

boxelder bugs, centipedes, crickets, earwigs, fleas, firebrats, millipedes, roaches, spiders, sowbugs/pillbugs, springtails, stink bugs and other crawling pests from getting inside the house, spray the lower portions of the foundation and the perimeter to about 3 feet out. Do not spray siding.

Precautions

- We recommend good safety practices when using any insecticide, such as avoiding contact with eyes and skin and avoiding directly breathing spray mist. If product gets in eyes, flush with water for at least 15 minutes. If on skin, wash with soap and water. If more than an incidental amount is swallowed, seek medical attention. Give one glass of water and do not induce vomiting. If in eyes, remove contacts and flush with water for 15 minutes. Seek medical attention for any persistent irritation. If seeking medical treatment, have this label with you.
- We recommend waiting until the spray is dry before allowing children or pets back into the treated area.
- Do not apply to food or trees/plants grown for food. If the spray contacts a food surface like an outdoor dining table, wash with water and dish soap before using for food.
- Keep out of lakes, streams and ponds.
- We've tested the product on various types of plants without causing any burning or browning, but test treat a small area first to be certain if you're concerned about plant sensitivity, apply at dusk and be careful not to over-apply.

Storage & Disposal: Store in a cool, dry area out of reach of children and upright in the original, closed container. Don't reuse the container. Dispose of in trash or offer for recycling if available.
